

Why Babies Cry

Babies cry for many reasons.

Before you can soothe your baby, it helps to understand why he or she cries...

Some of the reasons babies cry are:

- hunger
- too hot or too cold
- diaper needs changing
- discomfort/pain, fever/illness
- teething
- colic
- boredom/over-stimulation
- frightened – by loud noises or strangers

You can comfort your baby better when you know why he or she is crying.
